

# Descendants of Thomas Graves of Lunenburg Co. & Mecklenburg Co., VA (Gen. 152)

(Rev. 6 April 2021)

NOTES: This chart shows male lines of descent only, since the focus is on using Y-DNA analysis to trace the Graves surname. The number in each bottom colored box is the DNA test ID. When two descendants of a common ancestor have exactly the same DNA test results, it is assumed that the common ancestor also had that result, and all boxes up to and including the common ancestor have been given the same color.

All boxes with the same color have the same DNA test results.  
24 of 25 means that 24 of the 25 markers matched the inferred ancestral haplotype.  
A notation like 13-19 indicates a mutation from the ancestral haplotype, and means marker 13 had a value of 19.

**Important Note:** The inferred ancestral haplotype is the mode values shown in the master table of Y-DNA test results for the group that this genealogy is part of. The mutations shown on this chart are those from the overall group of R1-228b (not presently shown in the master Y-DNA table), not those deviations from the mean values of the subgroup.

Additional Y-DNA tests needed to better define this family (please let us know if you can find someone to participate):

- (1) Descendants of Daniel Boone Graves and Nathaniel Calvin Graves, sons of William S. Graves.
- (2) Another descendant of Thomas Graves, b.c. 1780, by a different line, preferably a brother of James Matthew Graves.
- (3) Descendants of Nathan and James Graves, sons of Thomas, b.c. 1750.
